to them after contact with European civilization. It is almost certain that before the coming of the white men, no reference to Easter Island existed in the native traditions of any other Polynesian island.

THE INDIVIDUAL IN SOCIETY

The small native community concentrated in the village of Hanga-roa presents today construction quite different from that which would have been observed before the collapse of the old culture. The intermixture of tribes has entirely changed the relationship of the individual to society and has abolished all ancient regulations and mutual obligations. Nowadays the only unity within the village is the biological family, whose importance has been maintained and perhaps increased since the introduction of the Catholic religion.

The present population of Hanga-roa village would be an interesting field for the study of changing culture and adaptation. Easter Islanders are the only Polynesians who have been subjected to the influence of a Spanish-speaking country. Contact with South American people has developed a type of society worthy of study and comparison with social conditions of Polynesians on other islands.

The culture pattern of Easter Island has been so greatly modified that very little information may be obtained as to the type of relationship observed in olden days. It is likely that after long contact with the natives certain tendencies which have been transmitted unaltered from pre-European times would be noticed, but these would be difficult to determine as they are not crystallized into specific institutions. They probably belong to the category of widespread attitudes observed by Polynesians in general. As most of my time on the island was spent in an attempt to reconstruct the past, I had little opportunity to study the new mode of life. So little is known of the past that it is impossible to determine whether the behavior followed by present natives is a survival of an ancient pattern or an adaptation due to changed conditions.

THE HOUSEHOLD

On Easter Island there are fifty houses for the present population of 456 natives, an average of nine persons for each house. The households include grandparents, parents and their children, brothers with their wives and children, and very often relatives or friends who are "visiting." The custom of living for an indefinite period in the home of a relative or friend is so common that it is a well-established institution. If a family is without resources, all or some of its members settle in the house of some other family. They are always welcomed and no one considers them parasites. "Visitors" usually choose a well-provided house. I found a few people who lived permanently in the homes of friends. Most of these were unmarried women with chil-

sources how great was the impression which was made by the foreigners.

Social Life.—Roggeveen's description of the people as being of all shades of colour is still accurate. They themselves are very conscious of the variations, and when we were collecting genealogies, they were quite ready to give the colour of even remote relations: "Great-aunt Susan," it would be unhesitatingly stated, was "white," and "Great-aunt Jemima black." The last real ariki, or chief, was said to be quite white. "White like me?" I innocently asked. "You!" they said, "you are red"; the colour in European cheeks, as opposed to the sallow white to which they are accustomed, is to the native our most distinguishing mark. It is obvious that we are dealing with a mixed race, but this only takes us part of the way, as the mixture may have taken place either before or after they reached the island.

They were divided into ten groups, or clans ("máta"), which were associated with different parts of the island, though the boundaries blend and overlap; members of one division settled not infrequently among those of another. Each person still knows his own clan.

In remembered times there were no group restrictions on marriage, which took place indiscriminately between members of the same or of different clans. The only prohibition had reference to consanguinity, and forbade all union nearer than the eighth degree or third cousins. These ten clans were again grouped, more especially in legend or speaking of the remote past, into two major divisions known as Kotuu (or Otuu), and Hotu Iti, which correspond roughly with the western and eastern parts of the island. These divisions were also known respectively as Mata-nui, or greater clans, and Mata-iti, or lesser clans. The lower portions of the island were the most densely populated parts, especially those on the coast, and the settlements on the higher ground appear to have been few (fig. 91).

In Kotuu, the Marama and Háumoana inhabited side by side the land running from sea to sea between the high central ground and the western volcano Rano Kao. They had a small neighbour, the Ngatimo, to the south, and jointly with the Miru spread over Rano Kao and formed settlements by the margin of the crater lake. The Miru lived on the high, narrow strip

between the mountain in the apex and the cliff, and mixed up with them was a lesser people, the Hamea. To the east was another small clan, the Raa, which is spoken of in conjunction with the Miru and Hamea.

The principal Hotu Iti clans were the Tupahotu, the Koró-orongo, and the Hitiuira. The last were generally known as the "Ureohei"; they inhabited jointly the level piece of ground from the northern bay to the south coast, and had some dwellings on the eastern headland. Next to them on the south coast was a small group, the Ngaure.[1] The particular importance of the clans lies in the fact that, while they may be merely groups of one body, they may, on the other hand, represent different races or waves of immigrants. If there have been two peoples on Easter Island, these divisions are one place where we must at least look for traces for it.

Legend tells of continual wars between Hotu Iti and Kotuu. In recent times general fighting seems to have been constant, and took place even between members of one clan. A wooden sword, or paoa, was used, but the chief weapon was made from obsidian, and took from it the name of "mataa." This volcanic glass is found on the slope of Rano Kao, but the principal quarries are on the neighbouring hill of Orito. Tradition says its use was first discovered by a boy who stepped on it and cut his foot. The obsidian was knapped till it had a cutting edge, and also a tongue, which latter was fitted into a handle or stick (fig. 92). The various shapes assumed were dignified by names, fourteen of which were given, such as "tail of a fish," "backbone of a rat," "leaf of a banana." It was very usual to pick up these mataa, and hoards were occasionally found; in one instance fifty or sixty were discovered below a stone in a cave, and in another case the hammer-stone was found with them which had been used in the process of squeezing off the flakes. The weapon was

[1] Of these clan names, "Raa" means the sun and "Marama" the light. The signification of the others is not equally clear, and the natives could give no assistance; but Mr. Ray gives the following interesting information from other Polynesian sources. "Haumoana" means the sea-breeze; "Hitiuira" is probably "hiti-ra" or sunrise; and "Ure-o-hei" another version of "ura-o-hehe," or red of sundown. "Koro-orongo" is doubtless from "Koro-o-Rongo," or the ring of Rongo (a well-known Polynesian deity), that is the rainbow. "Kotuu" appears to be a contraction of "Ko Otuu," meaning "The Hill"; the name "Otuu" is used alternatively for the same district. "Hotu" is another form of the word for hill and "Iti" signifies small, it presumably refers to Rano Raraku.
